The diagram illustrates a 2D convolutional layer. It consists of two rows of boxes representing the input and output feature maps. The top row shows the input feature map with 16 channels, arranged in a 4x4 grid. The bottom row shows the output feature map with 16 channels, arranged in a 2x2 grid. The input is processed by a 3x3 kernel, with a stride of 2, resulting in the output. The diagram also shows the padding of 1 unit on all sides of the input feature map.

The diagram consists of five rows of squares. The first four rows each contain 10 squares arranged in a single horizontal line. The fifth row contains 9 squares, also arranged in a single horizontal line. Every 10th square in the first four rows is shaded purple, representing a 10% discount. The last square in the fifth row is also shaded purple.

Diagram illustrating the addition of fractions using rectangular models:

- Top row: 10 empty rectangles
- Bottom row: 6 rectangles shaded in light purple, 4 empty rectangles

The total number of rectangles is 20. The shaded rectangles represent the sum of the fractions  $\frac{6}{10} + \frac{4}{10} = \frac{10}{10} = 1$ .
