1. **Introduction**  
 This document is a technical specification for a software system. It describes the system's architecture, components, and interfaces. The purpose of this document is to provide a clear and concise description of the system for developers and users.

2. **System Architecture**  
 The system is designed to be modular and scalable. It consists of several components that work together to provide the desired functionality. The architecture is based on a layered approach, with each layer responsible for a specific set of tasks.

3. **Components**  
 The system is composed of the following components:  
 - **Client**: The user interface that interacts with the system.  
 - **Server**: The central processing unit that handles requests and manages data.  
 - **Database**: The storage system that holds the system's data.  
 - **API**: The interface that allows external systems to interact with the system.

4. **Interfaces**  
 The system provides the following interfaces:  
 - **Web Interface**: A web-based interface for users to interact with the system.  
 - **API**: A RESTful API for external systems to interact with the system.

5. **Conclusion**  
 This document provides a detailed description of the system's architecture, components, and interfaces. It is intended to serve as a reference for developers and users. The system is designed to be flexible and adaptable to future changes.
