

Hand hygiene is a key measure to prevent the spread of infections.

It is important to use hand hygiene frequently, especially before and after touching people, objects, or surfaces.

Hand hygiene should be performed using soap and water for at least 20 seconds. If soap and water are not available, hand sanitizer containing at least 60% alcohol can be used. Hand hygiene is essential for preventing the spread of respiratory viruses, such as influenza and COVID-19, and for preventing the spread of other types of infections.

Hand hygiene is a simple and effective way to protect yourself and others from illness.
