## DEPARTMENT OF CHEMISTRY

### LABORATORY OF ORGANIC CHEMISTRY

PHILIP H. Plesch, F.R.S. (1918-1995) was a British chemist who made significant contributions to the field of organometallic chemistry. He is best known for his work on the catalytic mechanisms of metal complexes and for the discovery of the first stable organotin compound.

He was a member of the Royal Society and the American Chemical Society. He received the Nobel Prize in Chemistry in 1952 for his discovery of the first organotin compound.

His research interests included the chemistry of organotin compounds, organotin hydrides, and organotin chlorides. He also worked on the chemistry of organotin iodides and organotin bromides.

He published numerous papers on organotin chemistry and was a member of the editorial boards of several scientific journals. He was also a member of the Council of the Royal Society and the American Chemical Society.

His research has been highly influential in the field of organometallic chemistry and has led to the development of many new organotin compounds.
