

The diagram illustrates the relationship between the number of digits and the value of a number. It shows three rows of boxes, where each box represents a digit. The first row has 20 boxes (4 groups of 5), the second row has 16 boxes (4 groups of 4), and the third row has 12 boxes (1 group of 6 and 2 groups of 3). This visualizes how the number of digits affects the magnitude of the number.
