Онко-хирургия включает в себя различные методы лечения рака, направленные на удаление опухоли и предотвращение ее распространения. Основные методы включают:

- Хирургическое лечение: удаление опухоли путем операции.
- Радиотерапия: использование радиации для уничтожения раковых клеток.
- Химиотерапия: применение химических веществ для подавления роста раковых клеток.
- Лечение иммунотерапии: стимуляция собственной иммунной системы организма для борьбы с раком.

Важно отметить, что лечение рака должно быть индивидуальным, основано на типе опухоли, ее стадии и общем состоянии пациента. Рекомендации врача должны всегда превалировать над любыми другими источниками информации.

A horizontal row of ten empty rectangular boxes, each with a black border, intended for children to draw or write in.
