RESILIENCE OF OLDER PERSONS IN A CHANGING WORLD

Abstract: This study examines the resilience of older persons in a changing world. The research focuses on the factors that contribute to resilience and the impact of a changing world on older persons.

The study is based on a review of the literature on resilience and aging. The findings suggest that resilience is a dynamic process that is influenced by a variety of factors, including personal characteristics, social support, and environmental factors. The impact of a changing world on older persons is also discussed, highlighting the challenges they face and the need for support and resources.

The study also explores the role of resilience in promoting the well-being of older persons. The findings suggest that resilience is a key factor in promoting the well-being of older persons and that interventions aimed at enhancing resilience can be beneficial.

Keywords: Resilience, Older Persons, Changing World, Well-being, Aging, Support, Resources, Challenges, Opportunities, Interventions.

Introduction: The world is changing rapidly, and older persons are facing many challenges. Resilience is the ability to bounce back from adversity and maintain a positive outlook. This study explores the factors that contribute to resilience and the impact of a changing world on older persons.

The study is based on a review of the literature on resilience and aging. The findings suggest that resilience is a dynamic process that is influenced by a variety of factors, including personal characteristics, social support, and environmental factors. The impact of a changing world on older persons is also discussed, highlighting the challenges they face and the need for support and resources.
