THE UNIVERSITY OF CHICAGO

DEPARTMENT OF PHYSICS

PHYSICS 230

PHYSICS 230 is a course in classical mechanics. It covers the topics of kinematics, dynamics, and energy. The course is designed for students who have completed Physics 130 and are interested in a deeper understanding of the principles of mechanics.

The course begins with a review of kinematics, including the concepts of position, velocity, and acceleration. It then moves on to dynamics, where the forces acting on objects are discussed. The final part of the course focuses on energy, including the concepts of work, power, and conservation of energy. Throughout the course, students are encouraged to apply these principles to real-world problems.

Students who complete Physics 230 will have a solid understanding of the fundamentals of classical mechanics. They will be able to analyze and solve a wide range of problems involving motion, forces, and energy. This course is a prerequisite for more advanced courses in physics and engineering.

Physics 230 is a challenging but rewarding course. It provides a deep understanding of the principles of mechanics and the ability to apply these principles to a variety of problems. Students who complete this course will be well-prepared for further study in physics and related fields.
