Public Health Implications of Dengue Fever in Bangladesh: Rising Trends, Contributing Factors, and Public Health Implications

Dengue fever is a major public health problem in Bangladesh, with a significant increase in cases and deaths in recent years. The disease is caused by the dengue virus, which is transmitted by the Aedes mosquito. The rising trends of dengue fever in Bangladesh are attributed to several factors, including climate change, urbanization, and the presence of a large mosquito population. The public health implications of dengue fever are significant, as it causes severe illness and death, particularly in children and the elderly. The disease also has a major impact on the economy, as it leads to lost workdays and increased healthcare costs.
