INTERNATIONAL INFORMATION REPORT

2011

The International Information Report 2011 provides a comprehensive overview of the global information landscape. It examines the challenges and opportunities facing the information sector, particularly in the context of digitalization and the Internet. The report highlights the need for a multi-stakeholder approach to address these issues, involving governments, the private sector, and civil society.

The report is organized into several sections. The first section discusses the current state of the information sector, including trends in digitalization and the Internet. The second section examines the challenges facing the sector, such as digital divides, copyright issues, and security concerns. The third section explores the opportunities for the sector, including the potential for digital innovation and the growth of the digital economy. The fourth section discusses the need for a multi-stakeholder approach to address these challenges and opportunities. The fifth section provides recommendations for action.

The report concludes that the information sector is a key driver of economic growth and development. It is essential to ensure that the benefits of digitalization and the Internet are shared by all, and that the sector is governed in a transparent and accountable manner. The report calls for a multi-stakeholder approach to address these challenges and opportunities, and for action to be taken at the national and international levels.

The report also includes a number of annexes, including a list of abbreviations, a list of acronyms, and a list of references. The report is available in English, French, and Spanish. For more information, please visit the International Information Report website.
