The diagram illustrates a 2D convolution operation with a stride of 2. It consists of three rows of rectangular boxes. The top row has 10 boxes, the middle row has 4 boxes, and the bottom row has 8 boxes. The boxes in the middle row are positioned below the second, fourth, and sixth boxes of the top row. The boxes in the bottom row are positioned below the second, fourth, and sixth boxes of the middle row. This visual representation shows how the receptive field of each output unit in the middle layer is a 2x2 subregion of the input layer, and how the stride of 2 reduces the spatial dimensions of the feature maps.

The image consists of two identical horizontal rows of five empty rectangular boxes. Each box is defined by a black outline and is completely white inside. The boxes are evenly spaced and aligned horizontally. The entire set is centered on the page.
