Unemployment (or joblessness) occurs when people are without work and actively seeking work. The Bureau of Labour Statistics (BLS) defines unemployment as 'people without work who are actively seeking work'. This includes people who are looking for a job, on temporary layoff, or waiting to be rehired. It does not include people who are not actively seeking work, such as those who are retired, disabled, or have given up looking for a job.

It does not include people who are not actively seeking work, such as those who are retired, disabled, or have given up looking for a job. The BLS uses a specific methodology to measure unemployment, which involves surveying a large number of people and asking them whether they are currently employed, unemployed, or not in the labor force. The unemployment rate is then calculated as the number of unemployed people divided by the total number of people in the labor force.

The unemployment rate is used to track changes in the labor market over time and to compare the performance of different countries. It is a key indicator of economic health and is used by policymakers to make decisions about fiscal and monetary policy. A high unemployment rate is generally considered a sign of economic weakness, while a low unemployment rate is generally considered a sign of economic strength.
