

Assuming that the system is in a steady state, the input power to the system is equal to the output power. The input power is given by the product of the input voltage and current, and the output power is given by the product of the output voltage and current. The efficiency of the system is defined as the ratio of the output power to the input power.

When the system is in a steady state, the input power is equal to the output power. The input power is given by the product of the input voltage and current, and the output power is given by the product of the output voltage and current. The efficiency of the system is defined as the ratio of the output power to the input power.
