# Bangladesh Battles Record Dengue Deaths As Disease Pattern Changes

Health officials in Bangladesh are reporting a significant increase in dengue deaths, marking a record for the country. The disease, which is transmitted by mosquitoes, has become more prevalent in recent years, particularly in urban areas. The health ministry has issued a warning to the public, urging them to take preventive measures to avoid infection. The increase in deaths is attributed to a change in the disease's pattern, with more severe cases being reported. The health ministry has also announced a nationwide campaign to eliminate mosquito breeding grounds and to educate the public on the importance of personal hygiene and the use of mosquito nets.

The health ministry has also reported that the number of dengue cases has increased significantly in the past few months. This is a worrying trend, as dengue is a potentially fatal disease. The ministry has called for a coordinated effort between the government and the private sector to combat the disease. It has also urged the public to be vigilant and to report any suspected cases to the authorities. The health ministry has also announced that it will be providing free medical treatment for dengue patients in government hospitals. The ministry has also issued a warning to the public to avoid mosquito bites and to use mosquito repellents. The health ministry has also announced that it will be conducting a nationwide survey to determine the prevalence of dengue in different parts of the country. The ministry has also announced that it will be providing free mosquito nets to the public. The health ministry has also announced that it will be conducting a nationwide campaign to eliminate mosquito breeding grounds. The ministry has also announced that it will be providing free medical treatment for dengue patients in government hospitals.
