Bangladesh Battles Record Dengue Deaths As Disease Pattern Changes

Health officials in Bangladesh are reporting a significant increase in dengue deaths, marking a record for the country. The disease, which is transmitted by mosquitoes, has become more prevalent in recent years, particularly in urban areas. The health ministry has issued a warning to the public, urging them to take preventive measures to avoid infection. The increase in deaths is attributed to a change in the disease's pattern, with more severe cases being reported. The health ministry has also announced a nationwide campaign to raise awareness about dengue and its prevention. The campaign includes distributing educational materials and conducting door-to-door visits in high-risk areas. The health ministry has also implemented strict measures to control the mosquito population, including the use of insecticides and the elimination of breeding sites. The health ministry has also announced a nationwide campaign to raise awareness about dengue and its prevention. The campaign includes distributing educational materials and conducting door-to-door visits in high-risk areas.
